Education

Ongoing Master of Science in Electrical Engineering

Study line: *Automation & Robot Technology*

Denmark's Technical University — Sept. 2018 - June 2020

Thesis topic (ongoing): *"Situational awareness using Sensor Fusion at sea" - ShippingLab.dk*

Keywords: sensor-fusion, estimation, radar, tracking, localisation, perception, EKF, UKF, particle filters, sensor models, AIS, GPS..

Related courses: *Linear Control Design, Perception for Autonomous Systems, Robust & Fault-tolerant Control, Sensor Fusion & State Estimation, Image Analysis, Deep Learning, Robotic manipulators, Software frameworks for Autonomous Systems, middleware, ROS.*

Transcripts weblink

Diploma in Electrical Engineering

Aristotle University of Thessaloniki — 2011 - 2016

A respectful 5-year program in Greece. The program provided an all around engineering background in a variety of fields, such as electronics, mechanics, software development, control of electrical motors/generators.

Working Experience

Teaching Assistant in *Advanced autonomous robots*

Denmark's Technical University — Feb 2020 - Jun 2020

Responsible for aiding and providing guidance to over 80 students in their weekly exercise modules. Required solid understanding of topics such as: *Kinematics*, *Image Analysis, Perception in autonomous systems*, *EKF landmark localisation, planning algorithms, software frameworks for autonomous systems and development in a unix environment.*

Teaching Assistant in *Linear Control Design*

Denmark's Technical University — Sept 2019 - Dec 2019

Assisting MSc students in understanding and solving weekly assignments on topics related to: *state-space theory, sensor-fusion, linear observers, optimal controllers and optimal estimators, stochastic processes*.

High-voltage aerodynamic actuator design for a UAV

HCUAV , Greece — 2015 - 2016

Deployed a novel high voltage technology that can dynamically alter the airflow around an airfoil. Project included: *safety design and use of high voltage equipment, extensive prototype manufacturing and testing, CAD design.*

Formula Student Engineer - Aristurtle

Aristotle University of Thessaloniki — 2014 - 2015

Collaborated within a team of students which designed and constructed the first electric formula car in Norther Greece that competed in international competitions.

Relevant position competencies:

Guidance Navigation & Control, SLAM, Sensor Fusion, Probabilistic estimation techniques, Robust & Fault tolerant control, Deep Learning and semantic segmentation, Tracking moving targets using laser sensors.

Software skills

Python, C/C++ , Matlab & Simulink, ROS, GIT, Unix, PyTorch, openCV

Brief description of projects available on dimidagd.github.io

Awards

Field Robot Event 2019

Heilbronn, Germany — July 2019

Robotics competition in Germany in which the teams are asked to compete on autonomous farming tasks, such as field navigation, weeding, obstacle avoidance and mapping of the environment using an autonomous 4-wheeled vehicle. Our team of 3 students, managed to get the 3rd place out of 15 teams, in the Advanced Navigation task.

Skills involved: Software architectures for autonomous systems, LiDar sensor data handling, Computer vision, Sensor fusion, Localisation, Mapping.

Certifications

University of Pennsylvania: Robotics Specialization

This MOOC covered topics such as Perception, Planning, Control, Dynamics of mobile Robotics, over the course of 6 months.

Soft skills

Leading, taking initiatives, problem-solving, adaptability, group work.

Languages

English : Professional level(C1) Greek : Native German : Limited(B1)
